

Trichloroacetic Acid µg/L

Dept of Human Services &
Australian Drinking Water
Guideline Value

Description

100 µg/L (0.1 mg/L)

Haloacetic Acids (HAA's) occur principally as a product of the reaction of chlorine with naturally occurring organic materials within the water supply. HAA's are made up of three principal groups; Chloroacetic Acid, Dichloroacetic Acid and Trichloroacetic Acid and is a by-product of the chlorination/chloramination process used to disinfect the water supply.
